Election/Restrictions

- I. Claims 1-6, drawn to a cathode ray tube beam deflection means, classified in class 313, subclass 421.
- II. Claims 7-10, drawn to composite article winding, classified in class 242, subclass 430.

The inventions are distinct, each from the other because of the following reasons:

Inventions 7-10 and 1-6 are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the saddle-shaped deflection coil for a deflection unit could be manufactured by an operation in which the current-supply wire or current supply wires is/are placed so as to be U-shaped instead of S-shaped.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Robert J. Kraus on 11/21/01 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2879

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
